

Smooth Move Water Troughs

- At last! A high quality mobile stock water trough

In the livestock production game, protecting water supplies and delivering drinkable water to livestock is essential.

The Smooth Move trough is designed for livestock producers with 'cattle on the move,' and makes every planned stock move as smooth as possible.

Built to handle the toughest conditions, 'Smooth Move' water troughs are virtually maintenance free and have been extensively tested in high density cattle grazing operations.

Smooth Move troughs are durable, dependable and rapidly deployable and here's why:

Durability

- High quality stainless steel tub and steel chassis for extended service life
- High quality hydraulic grade water supply hose
- High quality - ultra high flow submerged water valve
- Fixtures are protected from livestock
- Valve Guard protects valve while allowing stock access to water
- Only one trough is usually required per farm

One Trough per Farm

Dependability

- 'Fail to Safe' design to ensure water delivery to stock is maintained
- Extensively tested and reliability demonstrated in high density cattle operations
- Designed as minimum maintenance
- Unique submerged float valve design provides rugged high flow over a wide range of water pressures and qualities, and temperature extremes
- 12 month warranty

Designed for a range of water pressures and water quality

Rapidly Deployable

- Easily towed behind a ute or four wheel motor bike
- Can water up to around 400 head of cattle depending on pressure and flow rate
- Easily applied & secure brake system
- Multiple troughs can be towed in 'train'
- Custom design for high or low water pressure and clean or dirty water
- Suited to watering points located on sloping ground
- Set and forget
